MINES @ 150: TAKING MINES ASME INTO THE FUTURE

Objective: Create a community with local university ASME student chapters and the Denver area ASME professional chapter to help our students connect with peers and professionals as well as receive career path guidance.

Background: The ASME Mines student chapter has about 650 members. We would like individual members to be able to participate in ASME activities and learn by taking individual initiative, which would be made through an interactive website. This platform would allow individuals to engage with their peers, as opposed to just having top-down communication from the ASME student leadership team.

This would also allow student chapter members to engage directly with the local ASME professional chapter – to request tours, speakers, and suggest other events.

Request:

1. Summer funding for the ME ASME faculty advisor
2. A web platform, along with web development support for an interactive website.
