Below and attached, please find our expression of interest for Mines Signature Student Experience Faculty Senate Funding 2020/21

Scott Houser and Michael Heeley
Division of Economics and Business

Business@Mines is a key element of the Mines@150 plan that seeks to ensure that all students learn principles that will enhance their careers and help them make good business decisions. Design and capstone courses are a part of the Mines curriculum where the connections to business acumen are most obvious to our students. The Division of Economics and Business proposes to develop business modules that can be integrated with design and capstone classes across programs and student levels, enhancing this signature student experience. Specific modules will be developed in consultation with faculty, students, alumni, and employers. Potential topics include project management, entrepreneurship, project evaluation, and financial statements. Business modules could be delivered online or face-to-face. As a pilot, we propose to develop several business modules for integration in at least one section of Design II in Spring 2021.

Scott Houser, PhD
Teaching Professor
Interim Division Director
Division of Economics and Business
Colorado School of Mines
